
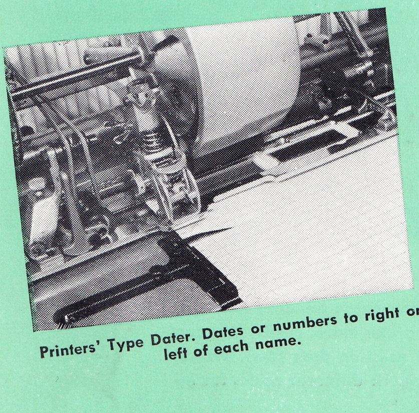
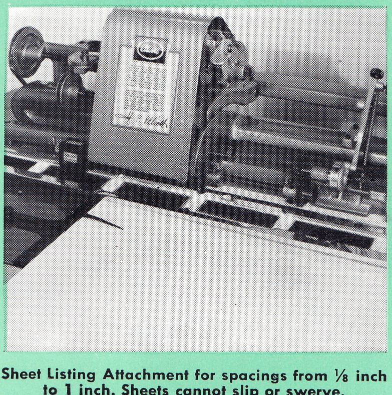
THIS Elliott MODEL 3000 JUNIOR

is a lower priced version of the Elliott 3000 Senior

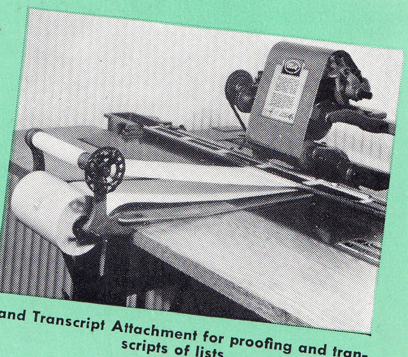
It addresses all forms face up with addresses visible to the operator. Three of its attachments are shown below. It does its addressing noiselessly.



Printers' Type Dater. Dates or numbers to right or left of each name.



Sheet Listing Attachment for spacings from ⅛ inch to 1 inch. Sheets cannot slip or swerve.



Hand Transcript Attachment for proofing and transcripts of lists.

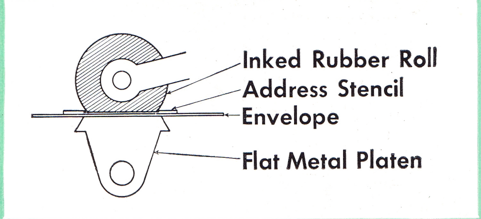
Note how the inked rubber roll and flat metal anvil of this Model 3000 Junior Elliott Addressing Machine squeeze an address card and envelope together (as in a vise) so that the ink from the surface of the rubber roller will pass through the stenciled characters to print an address.



Inked Rubber Roll
Address Stencil
Envelope
Flat Metal Platen

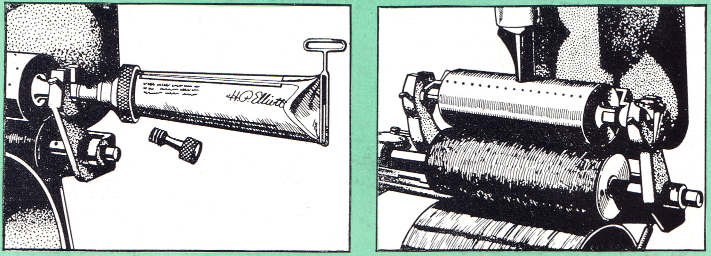
MAINE

It is impossible for ink to get on the frames of Elliott Address Cards, and because Elliott Address Cards are always handled by their clean frames, an operator's hands are kept clean.

The trays of Elliott Address Cards slide into and out of the hoppers of Model 3000 Junior like this.



Note how ink is squeezed from the ink tube into the Elliott Addressing Machine ink reservoir. An Elliott operator never touches ink or ink ribbons.

Elliott Address Cards

also serve as index cards because they are filed and handled like index cards. You can write, type, and print on their fiber frames, which are made in 12 different colors for index purposes.
